IMMUNE REGULATION

- 677 Cbl-b Is Upregulated and Plays a Negative Role in Activated Human NK Cells
Ting Lu, Li Chen, Anthony G. Mansour, Melissa J. Yu, Noah Brooks, Kun-Yu Teng, Zhenlong Li, Jianying Zhang, Tasha Barr, Jianhua Yu, and Michael A. Caligiuri

On the cover: Representation of the contact site between complement factor B (molecular surface) and the modified DNA aptamer SL1103 (stick model). In this issue, Xu and Zhang et al. show that SL1103 binds complement factor B with picomolar affinity, thereby blocking formation of the alternative pathway C3 convertase and inhibiting complement activation. Xu, X., C. Zhang, D. T. Denton, D. O’Connell, D. W. Drolet, and B. V. Geisbrecht. 2021. Inhibition of the complement alternative pathway by chemically modified DNA aptamers that bind with picomolar affinity to factor B. *J. Immunol.* 206: 861–873.
