NIH-funded postdoctoral positions are available in the laboratory of Vibha N. Lama MD, University of Michigan, to participate in a research project focusing on immune-mediated mechanisms in chronic lung allograft rejection. We utilize in vitro and in vivo approaches using murine single lung orthotopic mouse lung transplant models. Our translational studies leverage continuously banked mesenchymal and immune cells from well-defined cohorts of transplant patients.

The University of Michigan Medical School which ranks #12 in NIH funding, boasts of world-class researchers in a collaborative environment, along with teaching and mentoring opportunities. Our postdoctoral training includes lab-based/translational research, and numerous grant opportunities, and our active postdoctoral association offers ongoing professional development and networking resources.

Motivated candidates with PhD or MD/PhD in cellular and molecular immunology or molecular biology using rodent models of diseases are encouraged to apply. Hands-on relevant experience (flow cytometry and cell sorting, molecular immunology/biology, imaging), experience with immunological studies, and demonstrated productivity in publication record is strongly preferred. Collaborative, ambitious candidates interested in our research environment should send a curriculum vita, statement of research interests and contact information of three references via email to vlama@med.umich.edu

The Journal of Immunology

NEED TO RECRUIT?

Recruiting through The Journal of Immunology is an economical way to reach your target audience—the immunology community. Why pay more to reach geologists and physicists when you are seeking immunologists?

A ¼ page ad in The JI costs $750.

AAI Establishes COVID-19 Resources and Information Web Page

In response to the global coronavirus pandemic, AAI has established a COVID-19 Resources and Information page on its website to assist the immunology community in accessing essential pandemic resources, including articles and other information of interest to scientists and the public.

Resources and information that can be found include:
• Links to WHO and CDC websites
• AAI response to the crisis
• AAI members making news
• NIH alerts, clinical trials, and initiatives
• selected references and studies
• a global COVID-19 daily tracker
• and more

Visit the COVID-19 Resources and Information web page at www.aai.org/COVID-19-Resources.

AAI members are invited to submit stories of their research and other efforts related to COVID-19 for inclusion on this page. Please send your stories to bcoulter@aai.org. Inclusion will be at the discretion of AAI.
BioLegend Immunoassays

Answer Specific Questions and Make Expansive Discoveries

Focus on a Single Target. Measure Up to 13 Targets at Once.

Whether your goals are specific or broad, our immunoassay solutions streamline your path to discovery. Find all the reagents for your ELISA workflow with economical kits or measure multiple soluble proteins simultaneously with accessible LEGENDplex™ multiplex assays.

Novel Immunoassays to Dismantle SARS-CoV-2

- Identify effective anti-viral cytokine responses with BioLegend immunoassays.
- Detect antibodies for spike protein S1 and RBD domains with fully validated ELISA kits.
- Quantify SARS-CoV-2 IgG, IgA, and neutralizing antibodies with LEGENDplex™ multiplexing panels.

New RAPID MAX™ ELISA Kits

- Reduce assay time to less than 90 minutes and streamline your time in the lab.
- Detect IL-6, an important mediator of cytokine storm, with a simplified one-step, one-wash protocol.
