On the cover: This special issue of The Journal of Immunology, entitled “Maternal–Fetal Immunology,” highlights an outstanding cadre of immunologists who have been recognized as current and future thought leaders. The reviews in this special issue provide novel insights into different aspects of maternal–fetal immunology, together with their translational relevance for reproductive health and obstetrical complications. The cover was designed to represent the intricate relationship between the mother, fetus, and the immune system. Cover design by Julian Conde.
Cutting Edge: Bispecific γδ T Cell Engager Containing Heterodimeric BTN2A1 and BTN3A1 Promotes Targeted Activation of Vγ9Vδ2+ T Cells in the Presence of Costimulation by CD28 or NKG2D

Modification of the HLA-A*24:02 Peptide Binding Pocket Enhances Cognate Peptide-Binding Capacity and Antigen-Specific T Cell Activation
