

Wirtschafter & Korenberg

DIABETES MELLITUS

● The concise new book combines a discussion of wide clinical experiences with a critical review of all that is valid and important in the extensive literature of carbohydrate metabolism in health and disease.

THE AUTHORS:

Zolton T. Wirtschafter, M.D., *Clinician in charge, Clinic for Diabetes, Department of Medicine, Mount Sinai Hospital, Cleveland, Clinical Instructor in Medicine, Western Reserve University, Cleveland;* and **Morton Korenberg, M.D.,** *Montreal.*

You need the book, whether you study or treat diabetes mellitus. Order a copy now.

viii + 186 pages, \$2.50.

THE WILLIAMS & WILKINS COMPANY • BALTIMORE, MD.

Together with a complete discussion of the pathological physiology involved in diabetes, it answers questions like these:

- Where and how does insulin act?
- How is glycogen broken down into glucose?
- What is the role of phosphorus, thiamin chloride, and vitamin C in carbohydrate metabolism?
- Where are ketones made and how does one prevent ketosis?
- What do glucose tolerance tests actually test?
- Does glycosuria depend on blood sugar level?
- What is the effect of diabetes on the various organ systems?
- When is a diabetic controlled?
- What repair solutions are used in the treatment of coma and why?

THE EMPLOYMENT BUREAU

OF THE

Society of American Bacteriologists

● For the benefit both of employers seeking to fill vacancies, and of applicants desiring a position in the field of bacteriology, the Society of American Bacteriologists maintains an Employment Bureau. There is no charge for registering with the Bureau, but applicants for positions agree to send the bureau a small per cent of their salary for the first three months, viz., 3% if the applicant is a member of the Society, and 5% if a non-member. Funds received in this manner are used to defray actual operating expenses of the bureau on a non-profit basis, and any excess sums are transferred to the Society for the support and enlargement of its publications, research fellowship, culture collection, and other activities.

● Positions filled through the bureau include those of

Research Bacteriologist	Agricultural Bacteriologist
Teaching Bacteriologist	Industrial Microbiologist
Medical Bacteriologist	Laboratory Technician
Serologist	Hospital Technician

● Under present conditions, causing frequent changes, the Bureau is exerting added effort to fill vacancies. All inquiries are given prompt and careful attention. Address communications to:

Dr. Frank H. Johnson, Director

*Employment Bureau of the
Society of American Bacteriologists*
PRINCETON, NEW JERSEY

Before

*you study the next serologic report
get acquainted with Kahn's*

Serology in Syphilis Control

Principles of Sensitivity and Specificity

Because the book

Shows how to evaluate the results of tests. (It does not discuss which test is better or poorer than the other, nor does it describe technique.)

Gives you the reasons for "unexpected" reactions and tells what to do about them—

whether multiple tests
split specimens
supersensitive tests
repeat examinations
quantitative tests

are the answer to the problem before you.

Enables you to utilize available tests to best advantage in the diagnosis and treatment of syphilis and in the control of the disease.

CERTIFIED

POTASSIUM TELLURITE

NOW MADE IN U. S. A.

POTASSIUM TELLURITE, c.p., Certified. For use in preparing tellurite-cystine-blood agar according to the formula of McGuigan and Frobisher for the isolation of *C. diphtheriae*. Each lot is tested and furnished with specific directions for use. For example, Lot No. 19 now in our stock is furnished with the following directions for use:

T E C H N O L O G I C A L S E R V I C E

DIRECTIONS FOR USE
for
POTASSIUM TELLURITE
Lot No. 19

A sample of Lot No. 19 has been tested and, if used with the precautions published,* should yield satisfactory isolations of *C. diphtheriae* with medium of the following composition:

Infusion Agar, pH 7.4-7.6, 45° C.....	1000 ml
Sheep blood (citrate or defibrinated)	50 ml
Cystine, H.P., Pfanstiehl, dry	50 mgms
Potassium Tellurite, Coleman & Bell, Lot No. 19 (0.3% sterile, aqueous solution).....	150 ml

As this tellurite is very deliquescent it should, in humid weather, be weighed quickly so as to reduce error due to absorption of moisture. Open the bottle only when necessary.
