

THE JOURNAL OF IMMUNOLOGY

Information for Contributors

Manuscripts should be carefully revised and the original should be sent to

DR. JOHN Y. SUGG
Journal of Immunology
Cornell Medical College
1300 York Ave.
New York 21, N. Y.

Authors will be charged for space in excess of 10 printed pages and also for all illustrations and tabular or graphic matter in excess of 10 per cent of the pages in each article.

Author's alterations of type or illustrations on proof are charged to the author if in excess of an average of \$1.00 per printed page; correction of printer's errors are not charged to the author.

Reprints must be ordered in advance. A table showing cost of reprints, with an order slip, is sent with proof. Orders for purchased reprints must be limited to 1,000 copies. The invoice for reprints will also include charges for illustrations, excess pages and tabular matter, if any.

Instructions for the Preparation of Manuscript

Copy should be typed double-spaced on one side only of 8½ x 11 paper. Even material that is to be set in a type size smaller than that of the main text (footnotes, references, etc.) should be double-spaced.

The author should supply a short title for use as a running head. This should be typed on a separate sheet as the first page of manuscript. Type the complete title of the article on a second sheet, and the authors' names and affiliations on a third sheet. All material that is to be set in a type size different from that of the main text should be typed on separate sheets. This includes tabular matter, case histories, quotations, formulas and other subsidiary matter in the text, footnotes, bibliographies, and legends for illustrations. Displayed formulas which are to be built up to more than one line of type, even if they are the same size type as the text, should be on a separate page. Legends should not be attached to or written on the illustration copy. Positions for tables and figures in the text may be indicated in the margin of the text page.

Manuscripts that do not conform to these instructions will be cut and rearranged so that the matter to be set in different sizes of type can be separated.

Galley proof. Authors will receive galley proofs of their papers set separately as outlined above. Gallies will be arranged in the following order: tables, running heads, footnotes, figure legends, text, bibliography. All material that has been cut from the body of the text will be inserted in its proper place in the gallies. This includes formulas, quotations, case histories, and other subsidiary matter. Manuscript will be arranged in this order: formulas, tables, footnotes, figure legends, text inserts including bibliography, text.

Illustrations. Copy for illustrations should be unmounted glossy photographs clearly identified as to number, author's name, and top of figure in soft crayon on the back. Graphs should be in India ink on bluelined paper. If larger than 9 x 12", they must be accompanied by glossy photographs within this size.

IMMUNOLOGY*Official Journal of the BRITISH SOCIETY FOR IMMUNOLOGY**Editor: J. R. MARRACK*

VOL. IV, NO. 4

CONTENTS

OCTOBER, 1961

Agar diffusion studies on the species specificity of *Balantidium coli*, *B. cariae* and *B. wenrichi*.
By SERHIJ KRASCHENINNIKOW AND EDWARD L. JESKA.

The effects of guinea-pig gamma globulins on capillary permeability and serum complement.
By G. E. DAVIES AND J. S. LOWE.

Immunological unresponsiveness in guinea pigs. I. Immunological unresponsiveness to heterologous serum proteins. By J. H. HUMPHREY AND J. L. TURK.

Immunological unresponsiveness in guinea pigs. II. The effect of unresponsiveness on the development of delayed type hypersensitivity to protein antigens. By J. L. TURK AND J. H. HUMPHREY.

Rejection of skin grafts and production of specific iso-haemagglutinins by normal and X-irradiated mice. By H. S. MICKLEM AND J. A. H. BROWN.

Fluorescent protein tracer studies in allergic reactions. I. The fate of fluorescent antigen in active and passive Arthus reaction in the guinea-pig skin. By J. OORT AND TH. G. VAN RIJSSEL.

Rh antibodies detectable only by enzyme technique. By BARBARA E. DODD AND DOREEN A. FEELIS.

The complement-fixation test in hepatic coccidiosis of rabbits. By M. ELAINE ROSE.

Hyperreactivity to endotoxin in mice infected with mycobacteria. Induction and elicitation of the reaction. By E. SUTER AND EUGENIA M. KIRSANOW.

Histocompatibility genes of mice. III. *H-1* and *H-4*, two histocompatibility loci in the first linkage group. By G. D. SNELL AND L. C. STEVENS.

The metabolism of homologous and heterologous serum proteins in baby rabbits. By J. H. HUMPHREY.

Studies on the mechanism of hypersensitivity phenomena. IV. An isometric smooth muscle assay system. By HARRY G. RANDALL, SAMUEL L. TALBOT, HAROLD C. NEU AND ABRAHAM G. OSLER.

Studies on the mechanism of hypersensitivity phenomena. V. Antigen-antibody interaction in the guinea-pig small intestine. By HAROLD C. NEU, HARRY G. RANDALL AND ABRAHAM G. OSLER.

An investigation of immunological tolerance based on chimaera analysis. By DONALD MICHIE, M.F.A. WOODRUFF AND IRMGARD M. ZEISS.

The distribution of antibodies for erythrocytes in chromatographic fractions of early and late immune sera. By R. M. PIKE AND MARY L. SCHULZE.

Failure to influence the reception time of homologous skin grafts in the rabbit by prior injection of donor blood. By S. PIOMELLI AND M. S. BROOKE.

The inhibition of the haemolytic action of guinea-pig complement by heated guinea-pig serum. By J. D. HAWKINS.

Immunochemical studies of human serum proteins. Antigenic inhomogeneities of the γ globulins, their subunits and number of determinants and their relation to a Waldenström macroglobulin. By ROSA AUGUSTIN AND BARBARA J. HAYWARD.

Studies of the reaction between the sensitized erythrocyte and the first component of complement. By G. H. WIRTZ AND E. L. BECKER.

Book Reviews.
