## IMMUNOLOGY FOR STUDENTS OF MEDICINE

By *Humphrey & White*

The aim of this book is to give a concise account of current immunological concepts, especially in relation to their application to medicine, dentistry and veterinary practice. For this reason stress is laid on biological rather than immunological aspects, and illustrations are taken so far as possible from experience in Man. The subjects covered are non-specific mechanisms in immunity; the nature of antigens and antibodies; pro-

duction and metabolism of antibody; antigen-antibody interaction *in vitro*; prophylactic immunization and passive protection; hypersensitivity of various types; immunological problems of grafts and tumours; auto-immunization and disease.

By J. H. HUMPHREY, M.D., B.CHIT., Research Worker, National Institute for Medical Research, Mill Hill, London; and R. G. WHITE, M.A., D.M., B.CH., University Reader in Bacteriology, London Hospital. 176 pages, illustrated. About \$7.50.

## CLINICAL ASPECTS OF IMMUNOLOGY—*Gell & Coombs*

A number of distinguished experts review current methods and ideas on the diagnosis and investigation of disease in which the immunological approach is used, with a special emphasis upon the developing subject of immunopathology. Their purpose is to provide the clinician with a guide, at all points where immunology impinges upon clinical practice, to the basic principles of the methods used and the essentials of the results

obtained in recent work in this field. The contributors include F. O. MacCallum, J. Pepys, L. E. Glynn, E. J. Holborow, J. V. Dacie, B. Cruickshank and C. D. Calnan.

Edited by P. G. H. GELL, M.B., B.CH., Professor of Immunological Pathology, University of Birmingham; and R. R. A. COOMBS, M.R.C.V.S., B.SC., PH.D., Assistant Director of Research, Department of Pathology, University of Cambridge. 484 pages, illustrated. About \$10.00.

## THE SEROLOGY OF CONGLUTINATION AND ITS RELATION TO DISEASE—*Coombs*

Conglutination is a phenomenon which, since its first description in 1906, has been a source of much debate and controversy. Investigations in recent years have clarified much of the confusion, and have shown that conglutination has a rightful place in immunology. Dr. Coombs and his co-authors are unusually well qualified to write on this subject, in the development

of which they have played a leading part. The inclusion of an appendix on technical procedures makes the book additionally useful as a laboratory manual.

By R. R. A. COOMBS, M.R.C.V.S., B.SC., PH.D., ANNE M. COOMBS, B.A., PH.D., and D. G. INGRAM, D.V.M., M.V.S.C., PH.D. 216 pages, 55 illustrations. \$7.50.

*Diagnostic Reagents  
for the Determination of*

**ANTISTREPTOLYSIN TITERS**

*Bacto-Streptolysin O Reagent* is a standardized reagent recommended as an aid in the diagnosis of Rheumatic Fever, Glomerulonephritis and other diseases associated with Group A streptococcal infections.

**SENSITIVITY TESTS**

The significance of determining bacterial sensitivity is accentuated by the discovery of increasing numbers of antibiotics, sulfonamides, and other chemotherapeutic agents and the development of resistant organisms to one or more of these compounds. Sensitivity or resistance is easily determined with Bacto-Sensitivity Disks.

**HETEROPHILE ANTIBODIES**

The differential diagnosis of Infectious Mononucleosis requires the use of standardized heterophile reagents:

Bacto-Guinea Pig Kidney Antigen, Desiccated and Suspension  
Bacto-Beef Cell Antigen, Desiccated and Suspension

**BLOOD COAGULATION**

Prothrombin determinations require accurately prepared interstandardized reagents:

Bacto-Thromboplastin  
Bacto-Prothrombin 2 Stage Reagent  
Bacto-Prothrombin Free Beef Plasma  
Bacto-Prothrombin Free Rabbit Plasma

Bacto-AC Globulin  
Bacto-Sodium Chloride 0.85 Per Cent  
Bacto-Sodium Oxalate Solution 0.1 Molar  
Bacto-Calcium Chloride Solution 0.02 Molar

**LIVER DISEASE**

Differential diagnosis of hepatic disturbances is aided by standardized reagents:

Bacto-Cephalin Cholesterol Antigen  
Bacto-Thymol Turbidity Reagent  
Bacto-Thromboplastin and other Prothrombin Reagents

Bacto-Kingsbury Turbidity Standards

**RENAL FUNCTION**

*Phenolsulfonphthalein Ampules, Difco* is a carefully prepared injectable recommended for use in determining renal excretion rate.

**HEMAGGLUTINATION  
OF RED BLOOD CELLS**

Accurately determined by the use of:

Bacto-Trypsin 1% for Hemagglutination  
Bacto-Hemagglutination Buffer  
Bacto-Phytohemagglutinin

Trypsin, Difco, 1:250  
Bacto-Bovine Albumin 30%

**DIFCO LABORATORIES**

**DETROIT 1, MICHIGAN**
