Pease: L-FORMS, EPISOMES AND AUTO-IMMUNE DISEASE

This book offers an explanation of the cause of certain diseases which produce lesions by immune reactions, notably rheumatic, nephritic and hemolytic diseases. The hypothesis advanced is that these immune reactions are caused by sub-cellular units of bacteria (L-forms and pleuropneumonia-like organisms) which either synthesize or induce synthesis of the destructive antigens, enzymes and toxins.

Dr. Pease is a researcher who has been much concerned with studies of the relationship between bacteria and various subcellular infective elements, and certain agents regarded as viruses.

CONTENTS: The reproductive micro-elements of bacteria. L-forms of bacteria. Pleuropneumonia-like organisms (PPLO). Bacteria, viruses and episomes. Sub-cellular elements in bacterial infections. Microbial action upon blood cells. Immune and auto-allergic phenomena in disease. Theories of immunization. Hemolytic disease. Rheumatic fever and nephritis. Rheumatoid arthritis and related diseases. Tissue specific diseases. References. Index.

By *Phyllis Evelyn Pease, Ph.D.*, Lecturer in Virology and Bacteriology, University of Birmingham.
