

Figure S1. GSK3 inhibitors reduce Th17 cells in the spinal cord of mice immunized with MOG₃₅₋₅₅.

Mice were pretreated with 2.5 mg/kg TDZD-8, 5 mg/kg VP2.51, or 5 mg/kg VP0.7 for 3 days prior to immunization with MOG₃₅₋₅₅ peptide and daily throughout the experiment. 36 days after immunization with MOG₃₅₋₅₅ peptide, immune cells were recovered from the spinal cord and analyzed by flow cytometry. Histograms shown are Means \pm SEM; n=3-4, *p<0.05, ANOVA.
